Front-End Development Internship Task

Duration: 3 Weeks

Submission Deadline

Final Deadline: 28 April 2026 (11:59 PM)

All submissions must be completed and shared before this deadline. Late submissions may not be considered.

Project Title

Frontend Website Development (Select One Project Only)

Objective

This task is designed to help interns:

Build real-world, production-level websites

Develop strong UI/UX and responsive design skills

Gain experience with modern frontend technologies

Learn deployment and professional project delivery

Work independently in a structured development environment

Task Overview

Each intern is required to select one (1) project from the options below and develop a fully functional, responsive, and professionally designed website.

The final product must reflect industry-level standards in design, usability, and code quality.

Option 2: Quad Solutions (Medical Credentialing Website)

Description

Develop a corporate website for a medical credentialing company focusing on professionalism and trust.

Core Services

Provider Credentialing

Insurance Enrollment

Medical Billing Support

Compliance and Documentation

CAQH Profile Management

Required Pages

Home

About Company

Services

Process / Workflow

Testimonials

Contact Page

FAQ Section

Key Requirements

Clean and professional healthcare design

Trust-building elements (testimonials, credibility sections)

Lead generation form

Accessibility-friendly UI

Fully responsive design

Project Timeline

Week 1: Research and Design

Select project

Research industry-standard websites

Create wireframes/mockups

Finalize design system (colors, fonts, layout)

Start homepage development

Week 2: Development

Complete all pages

Implement full responsiveness

Add animations and interactions

Build and validate forms

Maintain design consistency

Week 3: Finalization and Deployment

Optimize performance

Fix bugs and UI issues

Improve design polish

Deploy website (Vercel, Netlify, etc.)

Prepare final submission

Mandatory Deliverables

Each intern must submit:

Live deployed website link

Complete source code (GitHub repository)

All project files and assets

Database files (if used)

Environment variables (.env file)

Documentation (README with setup instructions)

Important:

Submission must include full project access, including all necessary files, configurations, and environment variables.

Evaluation Criteria

Projects will be evaluated based on:

UI/UX Quality

Responsiveness

Code Structure and Best Practices

Functional Implementation

Creativity and Design

Completion and Deployment

Important Instructions

Select only one project

Ensure original and clean work

Avoid direct copy-paste without understanding

Follow proper project structure

Submit all required deliverables

Rewards and Recognition

Top-performing interns will receive:

Performance-based reward

Recognition certificate

Opportunity for future roles or collaboration

Optional Advanced Enhancements

For higher evaluation and recognition:

Dark/Light mode implementation

Real API integrations

Authentication system

CMS-like features

Advanced animations (Framer Motion, GSAP)
